SCOPE AND CONTENT NOTE

LexisNexis microfilmed *American War Production Mission in China, 1944–1945, Part I: Correspondence and Reports*, from the holdings at the Franklin D. Roosevelt Library in Hyde Park, New York. The collection chronicles the mission from its inception during the first advisory trip of U.S. War Production Board Chairman Donald M. Nelson to China in 1944 until its termination in late 1945. Correspondence, memoranda, cables, and reports compose most of the material; they are arranged as subject files in alphabetical order.

Authorized by President Roosevelt, the American War Production Mission in China was meant to serve both a short-term and a long-term purpose. On the one hand, it was intended to help bolster Chinese industrial production as the Allies concentrated their efforts on defeating Japan. On the other, it was meant to lay the groundwork for a strong Chinese economy in the postwar period. To that end, Donald Nelson and his assistants, Edwin A. Locke Jr. and James A. Jacobson, presided over a team of American industrial experts who met with Chinese government officials, toured factories, and compiled reports on various industries to determine the current state of the Chinese economy, make recommendations for its improvement, and provide assistance to their Chinese counterparts along the way.

Nelson's first trip to China, from August 25 to September 24, 1944, was referred to as the Nelson Mission. From this initial review of the Chinese industrial situation, Nelson recommended the creation of a Chinese War Production Board along the lines of the American War Production Board. Upon his return to the United States, Nelson advised the president on October 4, 1944, of a number of steps the United States should undertake to strengthen China's war economy. Steps included substantially strengthening the Foreign Economic Administration's Economic Mission at Chungking, establishing a joint China–United States Production Committee to coordinate the supply and production problems of the two countries, and allocating aircraft to the China National Aviation Corporation for the India-China service. The president asked Nelson to make another trip to China after receiving Nelson's recommendations and a request from Generalissimo Chiang Kai-shek that Nelson be sent back to China as soon as possible to assist with China's reconstruction.

The American War Production Mission began when Nelson returned to Chungking on November 16, 1944, as the personal representative of the president. He was joined by Locke; Jacobson; Howard Coonley, deputy in charge of the mission and formerly director of conservation, War Production Board; five iron and steel specialists; and one alcohol production specialist. Others would join the mission later. Together, these men worked to provide China with much-needed assistance as the war against Japan came to a close. Upon the war's completion, their mission was renamed the American Production Mission. It was terminated in November, 1945 and Locke, who had replaced Nelson as leader following Nelson's resignation on May 15, 1945, submitted his report to the president on December 18, 1945.

Mission participants researched every industry that was relevant to the war effort. They gave particular focus to the iron and steel industry, electric power production, coal mining, alcohol and auto fuel, textiles, and munitions. Reports on these and other industries provide detailed information on types of industrial equipment used, chemical processes, and

production statistics. Their presence in the collection allows the researcher an approximation of the understanding of the state of Chinese industrialization that Donald Nelson and his assistants faced as they sought to remedy problems and improve the flow of the Chinese economy.

The collection features information on American efforts to accelerate the transportation of lend-lease goods to China from storage places in India, including the allocation of American planes to the China National Aviation Corporation, and general information on improving supply routes in China. It also contains correspondence pertaining to the efforts of American businesses to train Chinese workers in their respective crafts, such as the Chrysler Corporation's maintenance, repair, and training program to augment the Chinese automotive industry. The collection additionally includes reports and correspondence concerning general Chinese economic policy, inflation, and foreign trade.

The folders contain numerous documents pertaining to the mission's personnel, organization, and logistical arrangements and requirements. The collection also includes files containing newspaper clippings germane to the mission. Included among these are articles dealing with the ouster of Joseph Stilwell following his disagreements with Chiang Kai-shek and others that deal with the question of how to come to terms with the Chinese civil war while the conflict with Japan was ongoing. Notable correspondents include Donald M. Nelson, Franklin Delano Roosevelt, Chiang Kai-shek, James A. Jacobson, and Edwin A. Locke Jr.

SOURCE NOTE

The materials microfilmed for this publication are from the Federal Records collection, Record Group 220, Temporary Commissions, Committees, and Boards: American War Production Mission in China, in the custody of the Franklin D. Roosevelt Library. LexisNexis has filmed all documents in their entirety.

EDITORIAL NOTE

This microform collection consists of various documents accumulated and produced by the American War Production Mission in China. The records of the American War Production Mission in China consists of forty boxes of material arranged into two groupings: one alphabetically by subject and another grouping of various War Production Reports. The original organization of the files has been retained by the Franklin D. Roosevelt Library.

PRINCIPAL CORRESPONDENTS INDEX

The following index is a guide to the major correspondents in this microfilm publication. The first number after each entry refers to the reel, while the four-digit number following the colon refers to the frame number at which a particular file folder containing correspondence by the person begins. Hence, 4: 0180 refers to the folder that begins at Frame 0180 of Reel 4. By referring to the Reel Index, which constitutes the initial section of this guide, the researcher will find the folder title and a list of Major Topics and Principal Correspondents, listed in the order in which they appear on the film.

SUBJECT INDEX

The following index is a guide to the major topics in this microfilm publication. The first number after an entry refers to the reel, while the four-digit number following the colon refers to the frame number at which the subject reel begins. Hence, 25: 0394 directs the researcher to Frame 0394 of Reel 25. By referring to the Reel Index, which constitutes the initial segment of this guide, the researcher will find the folder title and a list of Major Topics and Principal Correspondents, listed in the order in which they appear on the film.
